The Contractor and Surety are bound to the Owner in the amount set forth above, for the payment of which the Contractor and Surety bind themselves, their heirs, executors, administrators, successors and assigns, jointly and severally, as provided herein. The conditions of this Bond are such that if the Owner accepts the bid of the Contractor within the time specified in the bid documents, or within such time period as may be agreed to by the Owner and Contractor, and the Contractor either (1) enters into a contract with the Owner in accordance with the terms of such bid, and gives such bond or bonds as may be specified in the bidding or Contract Documents, with a surety admitted in the jurisdiction of the Project and otherwise acceptable to the Owner, for the faithful performance of such Contract and for the prompt payment of labor and material furnished in the prosecution thereof; or (2) pays to the Owner the difference, not to exceed the amount of this Bond, between the amount specified in said bid and such larger amount for which the Owner may in good faith contract with another party to perform the work covered by said bid, then this obligation shall be null and void, otherwise to remain in full force and effect. The Surety hereby waives any notice of an agreement between the Owner and Contractor to extend the time in which the Owner may accept the bid. Waiver of notice by the Surety shall not apply to any extension exceeding sixty (60) days in the aggregate beyond the time for acceptance of bids specified in the bid documents, and the Owner and Contractor shall obtain the Surety's consent for an extension beyond sixty (60) days.

If this Bond is issued in connection with a subcontractor's bid to a Contractor, the term Contractor in this Bond shall be deemed to be Subcontractor and the term Owner shall be deemed to be Contractor.

When this Bond has been furnished to comply with a statutory or other legal requirement in the location of the Project, any provision in this Bond conflicting with said statutory or legal requirement shall be deemed deleted herefrom and provisions conforming to such statutory or other legal requirement shall be deemed incorporated herein. When so furnished, the intent is that this Bond shall be construed as a statutory bond and not as a common law bond.

GENERAL APPROACH & WORK PROCEDURE

A physical survey of the job site will be made upon receiving a work request. If it is not possible to visit the site because of facility operations or timing, then the work plans will be reviewed. After the survey and/or plan review is done, a cost estimate will be developed and forwarded to the engineer for review. Upon approval and order by the owner, personnel and equipment will be dispatched to the job site at the time directed by the Engineer.

All video inspection activities will begin at the farthest upstream manhole and work in a downstream direction from there. If the camera cannot pass from access to access due to any obstructions, the camera will be positioned on the downstream access and a reverse set-up will be conducted to attempt to complete the inspection of the entire sewer reach.

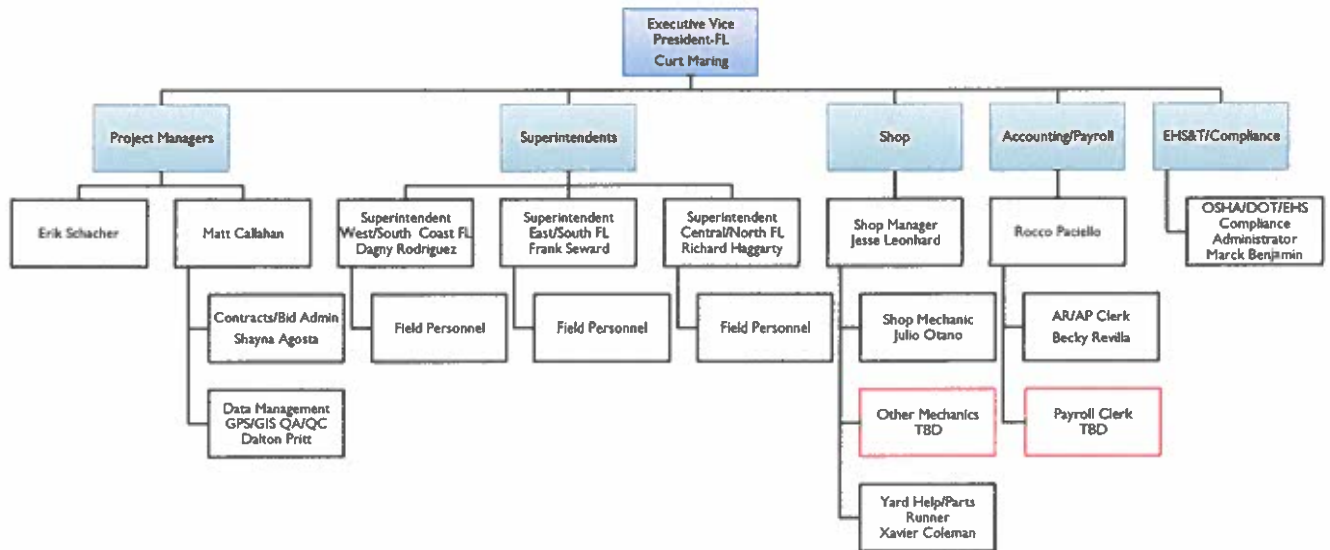

If no access is possible at the upstream manhole, then we will use the downstream manhole; and the camera will be passed from access to access.

There will be onscreen information such as date, job street name, upstream manhole number, downstream manhole number, or any other data you feel is important and a continuous footage read out so you can track the camera's location.

If conditions are ideal - a straight pipe from manhole to manhole, and then it is our intention to use our Multi-Angle Camera (MAC) main line system to conduct the inspection. In lines with deflections or elbows where the MAC camera cannot pass, we will use one of the alternative closed circuit color mini camera systems to conduct the inspection. The only drawback is you do not have the pan and tilt head capability.

All observations will be recorded on the videotape and an audio commentary will accompany the video inspection. Computer generated television inspection reports created with WinCan Software v7.16 will be produced at the conclusion of the job and submitted with the tapes or if requested by the customer, the videotapes can be converted to Compact Discs (CD) or Digital Video Discs (DVD+R), which last longer than videotapes and allow the user to navigate through a video clip easily. Each section of pipe will be indexed so that the viewer can jump to a specific observation without the hassle of having to fast forward and rewind as it is currently done with conventional videotapes.

At the conclusion of the cleaning and television inspection operation, two copies each of all videotapes/CD's/DVD's produced and copies of our written reports will be submitted to the customer.
