1.0 INTRODUCTION

The City of Sanibel has expressed concerns regarding the speeds on local roadways and the existing passing zone locations. Additionally, the City is looking into improvement options at the Rabbit Road and Sanibel Captiva Road intersection.

To evaluate existing traffic conditions within the City, Johnson Engineering conducted speed data collection and performed an analysis of the current passing zone configurations, as well as operational conditions at the Rabbit Road and Sanibel Captiva Road intersection.

1.1 Definitions

Pace Speed - 10 MPH range containing the largest number of vehicles within a given duration of time.

85th Percentile Speed - The speed at or below which 85% of motorists drive under free-flowing, favorable conditions. It is a key engineering metric used to set reasonable speed limits, as it represents the speed most drivers perceive as safe. Example: 125 cars were counted in the northbound direction. So 85 percent would be 106 ($125 \times 0.85 = 106$). Thus, the 106th car (counting up from the bottom) represents the 85th percentile speed

Average Speed - Average speed at which traffic is traveling over a given period of time.

Traffic Calming - “Traffic calming” is a general term used to describe a variety of methods used to discourage excessive vehicular speeds. Such methods range from simple education, informational and enforcement campaigns to signage and pavement markings to physical improvements such as speed humps, raised intersections, traffic circles (roundabouts), etc. Traffic calming measures are often and most effectively implemented as a program including a series of sequential improvements and continued monitoring of the traffic conditions.

ADT - Average Daily Traffic

Passing Zone - A designated, safe section of a roadway, typically marked by a broken yellow line, where drivers may legally overtake slower vehicles. These zones are established based on engineering studies that ensure adequate sight distance, allowing drivers to see oncoming traffic and safely pass without creating hazards.

2.0 SPEED ANALYSIS

To assess existing speed conditions, data was obtained from the sources and methods listed herein. The locations of the traffic speed counts performed can be seen in **Figure 2-1**.

2.1 Traffic Data Collection

From November 19, 2025 to December 9, 2025, 24-hour bi-directional data collectors were placed at the following six (6) locations:

- Sanibel Captiva Road East of Pine Avenue
- Sanibel Captiva Road West of Buckthorn Lane
- Sanibel Captiva Road East of Gulf Pines Drive
- Sanibel Captiva Road East of Rabbit Road
- Periwinkle Way
- Rabbit Road

The primary purpose of these counts was to determine if there is a pattern of speeding at certain locations throughout the City. A summary of the collected data is provided in **Table 2-1** through **Table 2-6** and the full speed reports are available in **Appendix A**.

3.0 PASSING ZONES

Johnson Engineering worked with City staff to review existing passing zones and the merit of adjusting the ‘No Passing’ zones in areas along Sanibel Captiva Road and Periwinkle Way. In designated passing zones, driver behavior often becomes more assertive as motorists anticipate an opportunity to overtake slower vehicles. When drivers are delayed for extended periods behind slower-moving traffic, frustration can build, leading to riskier maneuvers such as abrupt lane changes, tailgating, or attempting passes with limited sight distance. This impatience can reduce overall roadway safety, particularly on two-lane facilities where safe passing opportunities are limited. Prolonged delay behind slow drivers may also increase speed variability once a passing zone begins, elevating the potential for conflicts and crashes.

Passing zones are established in accordance with the criteria set forth in the Manual on Uniform Traffic Control Devices (MUTCD), which requires that adequate passing sight distance be available to safely complete a passing maneuver. For a posted speed of 35 mph, the minimum recommended passing sight distance is approximately 550 feet. Where this unobstructed sight distance is available, centerline pavement markings may be designated as a passing zone; where it is not, a no-passing zone should be established using appropriate pavement markings and signage to prohibit passing movements and enhance roadway safety.

After review of the existing passing zones and discussions with City staff, the following changes are recommended:

- Addition of a continuous no passing zone along Periwinkle Way
- Addition of a continuous no passing zone along Rabbit Road
- Addition of no passing zones along Gulf Drive
- Addition of no passing along Sanibel Captiva Road, just west of Tarpon Bay Road
- Addition of no passing at the southern portion of Dixie Beach Boulevard
- Addition of no passing along Casa Ybel Road
- Addition of no passing along Donax Street

4.0 RABBIT ROAD

Modifications to the existing three-way intersection at Rabbit Road and Sanibel Captiva Road can include conversion to an all-way stop control, addition of dedicated turn lanes, or reconstruction as a roundabout, each with distinct operational and safety implications. Converting the intersection to a three-way stop can reduce certain crash types, particularly angle crashes, and improve gap acceptance for minor-street movements; however, it may increase delay on the major approach and is typically most effective only at balanced, lower-volume intersections. Adding a dedicated westbound left turn lane along Sanibel Captiva Road or a northbound left turn lane along Rabbit Road can improve capacity, reduce rear-end conflicts, and enhance overall traffic flow by separating turning and through movements, though this option often requires additional right-of-way and higher construction costs.

Alternatively, under a no-build alternative, the existing three-way intersection at Rabbit Road and Sanibel Captiva Road would remain in its current configuration with no geometric or traffic control modifications. This option would avoid construction costs, right-of-way acquisition, and temporary traffic disruptions associated with the other alternatives. However, existing operational characteristics and safety concerns would remain unchanged, and any future increases in traffic volumes could result in additional delay, reduced gap acceptance for minor-street movements, and a potential increase in crash frequency or severity over time.

An additional option that is not being recommended at this time is to consider constructing a roundabout. This can significantly reduce severe crashes, lower vehicle speeds, and provide continuous flow with reduced delay compared to stop control; however, it involves higher upfront costs, greater design complexity, potential right-of-way impacts, and may require public education during implementation. As discussed with roundabouts in other areas of Sanibel, changes of this magnitude would likely require a public referendum. The preferred alternative should be based on traffic volumes, crash history, right-of-way availability, and long-term operational needs.

5.0 PUBLIC INVOLVEMENT

In an effort to solicit input from the City, a Presentation was held at the January 13, 2025 City Council Meeting. The purpose of this meeting was to present the preliminary findings of the analysis and gather feedback from the Council. Preliminary findings were presented as a series of charts and exhibits. These exhibits graphically portrayed the speeds of vehicles and exhibits of the existing passing zones.

6.0 RECOMMENDATIONS

Taking into consideration the safety of the traveling public, impacts to wildlife, and concerns of the public and staff, the following recommendations are being made to address the speeding and passing zone concerns. Per Florida Statute 316.189(1): *“The maximum speed within any municipality is 30 miles per hour. With respect to residence districts, a municipality may set a maximum speed limit of 20 or 25 miles per hour on local streets and highways after an investigation determines that such a limit is reasonable..... A municipality may set speed zones altering the speed limit, both as to maximum, not to exceed 60 miles per hour, and minimum, after investigation determines such a change is reasonable and in conformity to criteria promulgated by the Department of Transportation, except that no changes shall be made on state highways or connecting links or extensions thereof, which shall be changed only by the Department of Transportation.”*

Speed change recommendations include the following:

- Sanibel Captiva Road East of Pine Avenue - No Change
- Sanibel Captiva Road West of Buckthorn Lane - No Change
- Sanibel Captiva Road East of Gulf Pines Drive - No Change
- Sanibel Captiva Road East of Rabbit Road - No Change
- Periwinkle Way - Lower East Periwinkle Way from Causeway Boulevard to the Lighthouse to 25 mph
- Rabbit Road - No Change

The City may reduce posted speed limits where warranted to enhance public safety and address documented concerns from residents. In areas with increased pedestrian activity, wildlife strikes, residential density, or a history of speed-related incidents, lowering speed limits is a proactive measure to reduce crash risk and severity. Additionally, in corridors with frequent wildlife crossings, reduced speeds can help minimize vehicle–animal conflicts and improve overall roadway safety for both motorists and the surrounding environment.

6.1 Speed Analysis - Signage

In general, the roadways are currently operating at or near the 85th percentile of the roadway. One option in-lieu of lowering speed limits is the consideration of adding additional speed limit signs where there are gaps in the existing signage, see **Figure 6-1**. These are areas of generally straight roadway, where drivers can have a tendency to increase speeds.

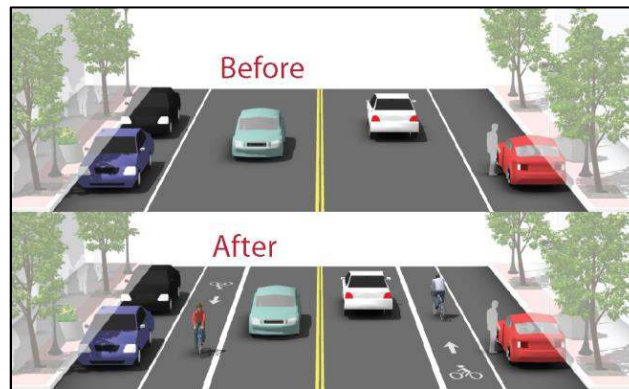

Figure 6-1: Additional Speed Signage Location Options

6.2 Speed Analysis -Traffic Calming

If the addition of signage does not sufficiently address the speeding issues, the City may wish to institute physical traffic calming measures to enhance speed control. One option is to consider the narrowing of travel lanes in specific areas of concern. The narrowing of traffic lanes creates a psychological effect on drivers which makes them feel less comfortable driving at higher speeds, which reduces excessive speeds. This method is relatively inexpensive and involves adjusting the existing outside striping inwards 1-2 feet depending on the existing travel widths and can be done during resurfacing projects.

An additional option is the addition of rumble strips. Rumble strips across travel lanes can be utilized near key intersection and driveway approaches to alert the driver to slow down and be aware of potential traffic entering the roadway. While in-lane rumble strips can improve safety by alerting inattentive drivers, they often generate increased tire-pavement noise, particularly when traversed by heavy vehicles. This additional noise can result in complaints from nearby residents and may be a concern in residential or noise-sensitive areas. The City has implemented rumbled strips in the past for both thermoplastic and asphalt options. Both installations were removed due to issues with noise.

6.3 Passing Zones

To address the safety concerns on the existing passing zones, the following recommended improvements include the following:

- Addition of a continuous no passing zone along Periwinkle Way
- Addition of a continuous no passing zone along Rabbit Road
- Addition of no passing zones along Gulf Drive
- Addition of no passing along Sanibel Captiva Road, just west of Tarpon Bay Road
- Addition of no passing at the southern portion of Dixie Beach Boulevard
- Addition of no passing along Casa Ybel Road
- Addition of no passing along Donax Street

The existing and proposed passing zones are shown in **Figure 6-2** and **Figure 6-3**.

As an additional safety enhancement, centerline rumble strips may be installed within no-passing zones to provide tactile and audible warnings to drivers who unintentionally drift across the centerline into opposing traffic.

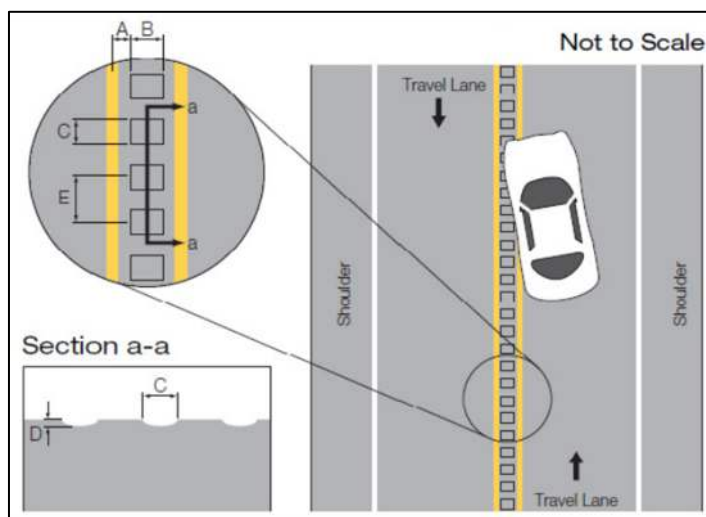

Figure 6-2: Existing Passing Zones

Figure 6-3: Proposed Passing Zones

6.4 **Rabbit Road**

The following options are for the City's consideration for the improvements at Rabbit Road and Sanibel Captiva Road:

- **No Build (Maintain Existing Intersection Layout)**
 - Maintain existing flow patterns
 - Zero cost
 - No construction disruption
 - No right of way acquisitions
- **Conversion to All-Way Stop Control**
 - May reduce certain crash types, particularly angle collisions.
 - Improves gap acceptance for minor-street approaches.
 - Most appropriate for balanced, lower-volume intersections.
 - May increase delay for the major roadway and reduce overall operational efficiency.
- **Addition of Dedicated Turn Lanes**
 - Enhances capacity and overall traffic operations by separating turning and through movements.
 - Reduces rear-end conflicts and improves intersection functionality.
 - May require additional right-of-way and associated construction costs.

The preferred alternative should be selected based on traffic volumes, documented crash history, right-of-way constraints, and long-term operational objectives. Further evaluation of the Rabbit Road intersection would be necessary prior to implementing any modifications in order to comprehensively assess the associated benefits, operational impacts, and potential trade-offs.
